

**RIVER THURSO, CAITHNESS**  
**FISHING TERMS & CONDITIONS – 2024**

**THE FISHINGS**

There are twelve beats, with up to two rods on each, moving downstream by two beats each day, allowing both Upper, Middle and Lower water to be fished in one week. The beats provide a wonderful variety of fishing and whilst much of the river has a fine running character, some beats, particularly lower 3, as well as sections of 6, 7 and 12 are long and deep. These pools are invaluable for the conservation of fish stocks in hot, dry weather conditions and with a good wind to ruffle the water, they can be very productive. The beats vary in length from just under one mile to three and a quarter miles, each having a variety of pools. (see [www.riverthurso.com](http://www.riverthurso.com) for detailed beat and pool descriptions.)

**ROD CATCHES FOR BEATS 2 – 13 (SEASON 11 JANUARY – 5 OCTOBER)**

- Fishing is by fair fly only, with a maximum of 2 rods per beat and fishing with bait, prawn, worm, spinner, spoon or any other lure is expressly forbidden. Fishing is from both banks and breast waders are not necessary.
- It is a prerequisite of fishing on the River Thurso that anglers sign and deliver **GYRODACTYLUS SALARIS DECLARATION FORMS to the Senior Ghillie (Geordie Doull) upon arrival or before their first day at the River, prior to commencing fishing. Anglers who have not signed and delivered the Declaration will not be permitted to fish.**
- Salmon Conservation – anglers are reminded that under the Salmon Conservation (Scotland) Act 2001, it is illegal to sell salmon and sea trout caught by rod and line. In accordance with the Scottish Government’s statutory catch and release regulations, all salmon caught prior to 1<sup>st</sup> April must be returned to the River. From 1<sup>st</sup> April until 16<sup>th</sup> of June any fish incapable of being safely returned (ie bleeders) must be handed to the Senior Ghillie (Geordie Doull) on the day the fish is removed from the River. From 17<sup>th</sup> June until 5<sup>th</sup> October, anglers fishing for a week may retain up to two fish, provided they do not exceed 8lbs in weight or 70cm in length. Treble hooks are not to be used at any time during the season and from 1<sup>st</sup> September until the end of the season (5<sup>th</sup> October) all hooks must be barbless.
- Trout fishing can be arranged through either Geordie Doull or Hugo Ross.
- Ghillies – if from fishing between weeks 11 to 39 and a personal ghillie is required, this should be organised in advance through the Senior Ghillie or Fishing Administrator (Jessica Dreaves). Personal ghillie charges must be paid to the Ulbster Arms Hotel 8 weeks prior to arrival.
- Accommodation - discounted hotel rates are available for anglers who stay at the Ulbster Arms Hotel during their fishing holiday. For further details, please contact Jessica at the Ulbster Arms Hotel.

Week 16	22 Apr to 27 Apr	£825	Week 35	2 Sep to 7 Sep	£1,400
Week 17	29 Apr to 4 May	£995	Week 36	9 Sep to 14 Sep	£1,400
Week 18	6 May to 11 May	£1,050	Week 37	16 Sep to 21 Sep	£1,400
Week 19	13 May to 18 May	£1,175	Week 38	23 Sep to 28 Sep	£1,400
			Week 39	30 Sep to 5 Oct	£1,400

## **DEPOSIT AND PAYMENT POLICY**

- Discounted bed and breakfast accommodation will continue to be available to anglers at the Ulbster Arms Hotel. Reservations will be taken for bed and breakfast, which are secured by the payment of a 25% deposit. Dinners, packed lunches, drinks, refreshments, etc, if taken, will be charged to room accounts and settled upon departure.
- Balances (ie typically 75%) of fishing and hotel bed and breakfast charges must be paid a minimum of 8 weeks prior to arrival. The non-payment of balances will be treated as a deemed cancellation.
- Deposits and balance payments are non-refundable, non-returnable and non-transferrable in the event of cancellation, non-arrival or early departure.
- Deposit and balance payments should be made by BACs to: Ulbster Arms Ltd,  
account number: 06103537, sort-code: 80-20-00

## **TRAVEL INSURANCE**

- It is a strong recommendation that clients have appropriate travel insurance.

## **ACCOMMODATION AND CATERING**

- As in previous years there are different room types available at the Ulbster Arms Hotel to suit individual budgets.
- The working assumptions for 2024 are as follows:
  - Breakfasts: In the Dining Room – on pre-agreed timings.
  - Packed Lunches: We continue to be committed to reducing single use plastics and package waste, whilst always striving to improve quality and provide guests with value for money. The simplified ordering system will be in place again for 2024 season.
  - Dinners: Evening food will continue to be available from 4.45pm until 8.30pm and fisherman can either dine in the Hotel restaurant or lounge bar.

# THURSO RIVER CONSERVATION STRATEGY - 2024

Anglers are reminded that under the Salmon Conservation (Scotland) Act 2001, it is illegal to sell salmon and sea trout caught by rod and line.

The catch and release provisions for 2024 will be:

- Period 11<sup>th</sup> January – 16<sup>th</sup> June

In accordance with the Scottish Government's statutory catch and release regulations, all salmon caught prior to 1st April must be returned to the River.

From 1<sup>st</sup> April until 16<sup>th</sup> of June any fish incapable of being safely returned (ie bleeders) must be handed to the Senior Ghillie (Geordie Doull) on the day the fish is removed from the River.

- Period 17<sup>th</sup> June – 5<sup>th</sup> October

Anglers visiting for a week may retain up to two fish provided they do not exceed 8lbs in weight/70cm in length.

Anglers visiting for less than a week may retain one fish provided it does not exceed 8lbs in weight/70cm in length.

I trust all fishermen who care for the river and its salmon will support our strategy.

## GYRODACTYLUS SALARIS

Gyrodactylus salaris is a parasite which infects the skin, gills and fins of salmon, trout and some other types of fish in fresh water. It is less than half a millimetre in size, so small that it is barely visible to the naked eye. Despite this, it can cause serious damage in some strains of Atlantic salmon.

The effects of the disease are so serious that salmon stocks have now been lost completely from more than 20 Norwegian rivers, with the particular races of salmon in the affected rivers being lost forever. Gyrodactylus salaris does not occur in UK rivers but experiments carried out in Norway have shown that our salmon, like those of Norway, are killed by parasite. It is therefore essential that the parasite is not introduced into UK waters.

To eliminate Gyrodactylus salaris from affected rivers, all types of fish capable of harbouring the parasite must be removed which would involve poisoning whole catchments. Such remedial work is destructive, difficult, very expensive and likely to take many years. It may also not be successful.

Gyrodactylus salaris is a listed notifiable disease and legislation is in place to prevent the transfer of live salmon and trout (the main hosts for the parasite) to British waters. This has now been supplemented by EU legislation that recognises the special status of the UK as being proven free of the parasite.

This parasite is very hardy and may be inadvertently introduced by fishermen. It is capable of surviving for several days in damp conditions such as plastic bags, wet angling equipment (eg bags, waders, landing nets, lines) and the wet surface of dead fish (eg bait fish). The parasite can also survive on other fish species including the eel. Care needs to be taken at all times to ensure that movement of these other species takes place strictly in accordance with statutory fish health requirements. As the parasite has a direct life cycle and reproduces very rapidly, **it is possible that even a single specimen imported by accident to a previously unaffected river would be capable of starting an epidemic in a very short time.**

Further information can be obtained from:

Fisheries Research Services, Marine Laboratory, PO Box 101, Victoria Road, Aberdeen AB11 9DB

**GYRODACTYLUS SALARIS  
ANGLER DECLARATION**

**Please give this signed declaration to Geordie Doull (senior ghillie - phone: 07734 601562),  
or Jessica Dreaves (fishing coordinator – 01847 831641) or another Thurso ghillie  
ON ARRIVAL AT THE THURSO AND BEFORE COMMENCING FISHING.**

Gyrodactylus salaris (GS) is the greatest threat to wild salmon in our Scottish rivers, and the UK as a whole. It is a parasitic freshwater fluke which is indigenous to rivers in parts of Russia, Norway and Sweden, where salmon have evolved resistance to it. However, GS has spread to rivers in Norway, Denmark, Germany, France, Spain and Portugal where native salmon have no resistance, resulting in mass mortality of juvenile fish. In Norway infected rivers lost 98% of their salmon within 5 years. Infected rivers must be poisoned to remove all fish hosts, and barriers erected to stop salmon entering the river to spawn and generate more hosts. GS can survive for 5 to 7 days without a host in damp conditions (**eg angling clothing, waders, wet reels, lines or landing nets**).

Currently the UK is GS-free. The economic and ecological consequences of GS entering the country would be catastrophic. Please do your part to prevent GS from decimating our wild salmon by signing this Angler Declaration **before fishing**.

**ANGLER DECLARATION**

A I declare that none of my fishing equipment has been outside the United Kingdom in the three months prior to the commencement of my fishing on .....  
(insert date)

Signed ..... Print Name .....  
(Fishing Tenant)

B I declare that my fishing equipment **has** been used outside the united Kingdom in the three months prior to the commencement of my fishing on .....(insert date) and that it has been properly sterilised adopting one of the following methods (*please tick one of the following*):

Method A: Drying to a minimum of 20°C for at least two days

Method B: Heating to above 60°C for at least one hour

Method C: Deep freezing for at least one day

Method D: Immersion of materials in a solution of, or addition of one of the following chemicals to water to the concentration indicated for a **minimum** of 10 minutes:

Virkon 1%

Wescodyne 1%

Sodium Chloride (common salt) 3%

Sodum Hydroxide 0.2%

*NB The chemicals above may be available from agricultural chemical suppliers. The use of trade names is for illustrative purposes only and does not imply endorsement of any particular product. Users should check that their use does not damage their equipment.*

Signed ..... Print Name .....  
(Fishing Tenant)

C I declare that my fishing equipment has been used outside the United Kingdom in ..... (country) in the three months prior to the commencement of my fishing on .....(insert date) and has **not** been sterilised.

I agree that it will be sterilised by the fishery proprietors before I commence fishing and I understand that this may result in a delay in the start of my fishing.

Signed ..... Print Name .....  
(Fishing Tenant)
